Tony, Nahal is out and I'm working on the Gold King Mine Spill. I've forwarded your request to our communications director. Can you tell me what kind of data you're looking for? Final reports? I know there was a large lead cleanups in region 7, Joplin Missouri maybe? We did a great project in west Oakland using fish bones but it was small in comparison to Exide.

Good afternoon: I've got an on-deadline request. Does EPA have records of any large lead-soil cleanups completed in neighborhoods near industrial sites and how many homes were involved?

We'd like to compare the news that the Exide Technologies cleanup in Vernon could involve up to 10,000 homes with EPA's data on past cleanups.

Thanks,

Tony Barboza
